This document describes the interface definition for the extended order history that needs to be provided by the connected ERP Systems.

The interface was initially built based on SAP/R3.

Common Requirements

In order to make the interface secure it is required to pass either a debtor number **or** an E-Mail address.

The E-Mail address is only used if no debtor number has been passed, and it is only used to find orders for CPD/One-Time customers.

The interface should return all information, independent whether the order has been placed through Spryker or not. This will give the customer the possibility to check the order/delivery status also for historic orders and orders placed i.e. for telephone or EDI.

Order Search

This Interface is used to get a list of orders, based on the given criteria.

Input

Field	Description	Data Type	Example
Debitor Number		String	0000027176, C00120
E-Mail Address		String	user@example.com
Date From	Return only orders that are placed on or after this date	String (ISO-Date)	2023-01-31
Date Till	Return only orders that are placed on or before this date	String (ISO-Date)	2023-02-28
Order Number	Order number of the ERP System	String	0000253131, 2115568
Customer Order Number	Order number provided by the customer during order placement	String	Area 51
Delivery Number	Delivery Number of the ERP System - return only orders that belong to this Delivery	String	0000253131, 2115568
Invoice Number	Invoice Number of the ERP System - return only order the belong to this Invoice	String	0000253131, 2115568
Material Number	return only orders that contain this material number	String	1130005333
Order Status	return only orders with the given order status • ALL - return all orders • OPEN - return all orders that are not complete/shipped yet • SHIPPED - return shipped orders only		

UI for input:

Search in Orders

Date from	to	Status
01.08.2022	11.08.2022	all
Your Reference No.	Order No.	Your Material No. / STAUFF Material No.
Delivery No.	Invoice No.	Search

Output

Field	Description	Data Type	Example
Order Number	Order number of the ERP System		
Customer Order Number	Order number provided by the customer durign order placement		
Order Date	Date of order creation	String (ISO-Date)	2023-01-31
Order Status	The order or delivery status: • OPEN • CANCELLED • PREPARATION • SHIPPED		

Sample Outupt:

Date ↑	Your Reference No. ↑	Order No. ↓	Status ↑	Actions
11.08.2022	14164744	0002520611	open	
11.08.2022	42101823	0002520499	despatched	
11.08.2022	42101821	0002520496	open	
11.08.2022	32133129	0002519890	open	
10.08.2022	82082167	0002519675	despatched	
10.08.2022	32133119	0002519578	despatched	
10.08.2022	22098187/BC22-0843	0002519304	open	

Order Detail

This Interface is used to get details of one order.

Input

Field	Description	Data Type	Example
Debitor Number		String	0000027176, C00120
E-Mail Address		String	user@example.com
Order Number	Order number of the ERP System	String	0000253131, 2115568

Output

The result need to contain the following data that could be grouped as follows

Order Header

Some basic information about the order

Field	Description	Data Type	Example
Order Number	Order number of the ERP System	String	0000253131, 2115568
Customer Order Number	Order number provided by the customer durign order placement	String	Area 51
Order Date		String (ISO-Date)	2023-01-31
Order Status	• OPEN • CANCELLED • SHIPPED • ...		
Shipping Address			
Shipping Condition	requested Shipping Condition		

Sample from the current UI:

Your Reference Number	Order Number	Date	Status
00003/0032133096	0002519180	10.08.2022	 open
Shipping Address	Shipping Condition		
RAUH Hydraulik GmbH	- By Truck -		
Senefelderstr. 7			
86368 Gersthofen			
Germany			
Unloading Point			
-			

Order Documents

The interface has to return a list of references to the available delivery notes and invoices, so they can be offered for download.

Download all documents 

Delivery Notes

☐ 8000290234.pdf 

☐ 8000291089.pdf 

Invoices

☐ 0093064433.pdf 

☐ 0093065486.pdf 

Download selected documents

Order Positions

List of Items of the order

Field	Description	Data Type	Example
Position Number	Position number of the ERP System	String	
Customer Material Number		String	
Material Number	the STAUFF Material Number	String	1130005333
Material Description	Description / Name of the STAUFF Material	String	216-PP
Amount	ordered quantity	Decimal	
Delivery Status	• OPEN • CANCELLED • SHIPPED • ...		
Shipping Date		String (ISO-Date)	2023-01-31
Delivery Number	Delivery number of the ERP System, used to link to a delivery		

 One order position could be send in multiple shipments, so the interface needs to support his usecase.

Sample from the current UI:

Order Positions

Pos. ↑	Your Material No. ↑	Material No. ↑	Material Description ↑	Amount ↑	Status ↑	Despatch Date ↑
100	249933	6100096390	HCS-19-DKO-25S-S-OR-B-M-W3	50	 -  - 	planned, 16.11.2022
200	256392	6100095286	HCI-25-DKO-30S-S-OR-B-M-W3	24	 -  - 	planned, 16.11.2022
300	553175	6100095229	HCI-19-DKO-30S-S-OR-B-B-W3	10	 -  - 	31.08.2022 ^
Delivery Number				10	 -  - 	31.08.2022
8000329057 						

It is also possible to show the order positions based on the delivery status, with additional information related to the shipment, i.e.

Delivery Status

Positions Despatched				 -  - 
Delivery Number	Delivery Note	Despatch Date	Shipping Condition	
81877233 	-	26.05.2014	DHL FrEx. ND 09:00	
Freight Forwarder	Tracking Codes			
DPD Deutschland GmbH	01585004366257			
Pos.	Your Material No.	Material No.	Material Description	Amount
10	139971	1130003986	IS-M6X30-ISO4762-70-W5	48
20	140013	1130000260	DP 1a W4	23
30	139784	1130003772	430 PA	100

Cancelled Positions

Pos.	Your Material No.	Material No.	Material Description	Amount
100	139570	1120000297	SP 1a M W4	24

As you can see, for a delivery additional information will now be shown:

Field	Description	Data Type	Example
Delivery Number		String	
Delivery Note	Some Reference to the delivery note document for download, if it exists.		
Delivery Status	• OPEN • CANCELLED • SHIPPED • ...		
Shipping Date		String (ISO-Date)	2023-01-31
Shipping Condition			
Freight Forwarder			
List of Tracking Codes	The list consists of the Trackingcode plus an optional full qualified URL so the user can go directly to the online tracking system of the freight forwarder, i.e. DHL, UPS, ...		

Delivery Search

Just like for the orders, the customers can search for delivery based on some criteria

Input

Field	Description	Data Type	Example
Debitor Number		String	0000027176, C00120
E-Mail Address		String	user@example.com
Date From	Return only deliveries that are created on or after this date	String (ISO-Date)	2023-01-31
Date Till	Return only deliveries that are created on or before this date	String (ISO-Date)	2023-02-28
Delivery Number	Delivery Number of the ERP System	String	0000253131, 2115568
Delivery Status	return only delivery with the given order status • ALL - return all delivery • OPEN - return all delivery that are not complete/shipped yet • SHIPPED - return shipped deliveries only		

Output

Field	Description	Data Type	Example
Creation Date		String (ISO-Date)	2023-01-31
Shipping Date		String (ISO-Date)	2023-02-28
Delivery Number	Delivery Number of the ERP System	String	0000253131, 2115568
Delivery Status	• OPEN • PREPARATION • CANCELLED • SHIPPED • ...		

Sample from the current UI:

Created at ↑	Despatch Date ↑	Delivery No. ↓	Status ↑	
12.08.2022	15.08.2022, planned	8000329080	 -  - 	
12.08.2022	31.08.2022	8000329057	 -  - 	
12.08.2022	15.08.2022, planned	8000328917	 -  - 	
12.08.2022	12.08.2022	8000328287	 -  - 	

Delivery Detail

This Interface is used to get details of one delivery/shipment.

Input

Field	Description	Data Type	Example
Debitor Number		String	0000027176, C00120
E-Mail Address		String	user@example.com
Delivery Number	Delivery number of the ERP System	String	0000253131, 2115568

Output

The result need to contain the following data that could be grouped as follows

Delivery Header

Some basic information about the delivery

Field	Description	Data Type	Example
Delivery Number		String	0000253131, 2115568
Shipping Date		String (ISO-Date)	2023-01-31
Delivery Status	• OPEN • CANCELLED • SHIPPED • ...		
Shipping Address			
Shipping Condition	requested Shipping Condition		
Freight Forwarder			
List of Tracking Codes	The list consists of the Trackingcode plus an optional full qualified URL so the user can go directly to the online tracking system of the freight forwarder, i.e. DHL, UPS, ...		
Delivery Note	Reference to the Delivery Note, it if exists

Delivery Positions

List of Items of the delivery

Field	Description	Data Type	Example
Position Number	Position number of the ERP System	String	
Customer Material Number		String	
Material Number	the STAUFF Material Number	String	1130005333
Material Description	Description / Name of the STAUFF Material	String	216-PP
Amount	ordered quantity	Decimal	
Order Position	Position of the item in the related order		
Order Number	Order number of the ERP System, used to link to a order		
Order Date		String (ISO-Date)	2023-01-31
Customer Order Number			
Ordered Amount			

⚠ one deliver position could consists of two independent orders, if the customer ordered the same material multiple times, but their delivery has been combined into one shipment.

Sample UI:

Delivery Positions

Pos. 	Your Material No. 	Material No. 	Material Description 	Amount 	
10	349405	6100095922	HCS-10-ORS-08-045-S-M-W3	10	
Order Pos.	Date	Your Reference No.	Order No.	Amount	
1,800	27.04.2022	00003/0032131166	0002456550 	10	
20	561341	6030002986	FI-GE-18LMk-W3	5	
30	557278	6010002009	FI-EW-15L-W3-SV	100	
40	560773	6020000471	FI-GE-10LR-WD-B-W3	900	
60	559793	6010004110	FI-VD-12L-V-W3-M	400	

Invoice Search

Just like for the orders and deliveries, the customers can search for invoices based on some criteria.

Input

Field	Description	Data Type	Example
Debitor Number		String	0000027176, C00120
E-Mail Address		String	user@example.com
Date From	Return only invoices that are created on or after this date	String (ISO-Date)	2023-01-31
Date Till	Return only invoices that are created on or before this date	String (ISO-Date)	2023-02-28
Invoice Number	Invoice Number of the ERP System	String	0000253131, 2115568

Output

Field	Description	Data Type	Example
Creation Date		String (ISO-Date)	2023-01-31
Invoice Number	Invoice Number of the ERP System	String	0000253131, 2115568

Sample fro the current UI:

Date ↑	Invoice ↓
☐ 30.01.2020	0092532003.pdf ↓
☐ 03.01.2020	0092528690.pdf ↓
☐ 31.01.2020	0092528050.pdf ↓

There is no details view for an invoice just the possibility to download the related PDFs.

Document Download

It needs to be possible to download PDF documents for delivery notes and invoices if they exist in the ERP.

The current implementation with the SAP/R3 returns some references in the aforementioned interfaces, that could be passed to this interface to actually download the PDF.

Order Download

This interface is used by the customers to get an Excel document for a list of orders, their items and the status of their delivery. Actually a bulk download of **Order Details**.

The data could be built based on the aforementioned interfaces, we found it is much faster when the data are aggregated within the ERP system, instead of making hundreds of API calls.

The interface does only need to respond with the data., The Excel document will be build by Spryker!

Input

Field	Description	Data Type	Example
Debitor Number		String	0000027176, C00120
E-Mail Address		String	user@example.com
List of Order Numbers	List of Order Number of the ERP System		

Output

Field	Description	Data Type	Example
Debitor Number	might be empty for one-time customers		
Customer Name	usually the name of the debtor/company		
Customer Order Number			
Order Number			
Order Position Number	Position number of the ERP System	String	
Customer Material Number		String	
Material Number	the STAUFF Material Number	String	1130005333
Material Description	Description / Name of the STAUFF Material	String	216-PP
Total quantity	ordered quantity, i.e. 17	Decimal	
Quantity Unit	the unit, like PCE, MTR		
Open Quantity	The quantity that is not processed yet		
Planned Quantity	The quantity that is planned for shipment		

Shipped Quantity	The quantity that has been shipment		
Shipping Date (planned)		String (ISO-Date)	2023-01-31
Shipping Date (actual)		String (ISO-Date)	2023-02-28
Freight Forwarder	The freight forwarder used, i.e. UPS, DHL		
Shipping Condition			
Delivery Number	Delivery number of the ERP System		
Invoice Number	Invoice number of the ERP System		
Tracking Numbers	List of Tracking numbers. One Delivery might be split into multiple shipments		

Find attached an example of the result.
